XRF Glass Monitor Sample Catalog

Monitor glasses for
X-ray fluorescence (XRF)

LGC Quality | ISO 17034 | ISO/IEC 17025 | ISO 9001 | ISO 17043

Over 1,400 reference materials 20 different alloy groups

Our certification process is accredited to ISO 17034 for reference material producers and includes both homogeneity testing of candidate material, and chemical analysis of major and trace elements using a wide range of analytical methods including XRF, ICP-OES, ICP-MS, Arc-Spark Optical Emission, GD-AES and GD-MS.

Chemical analyses are performed in our state-of-the-art laboratory accredited to ISO/IEC 17025 using XRF, ICP-OES and ICP-MS, as well as through a network of external laboratories through the use of multiple analytical techniques.

This approach insures that we produce high quality reference materials with the largest number of certified elements while limiting inter-technique biases.

ARMI | MBH is a producer of high quality reference materials for the chemical analysis of metal alloys.

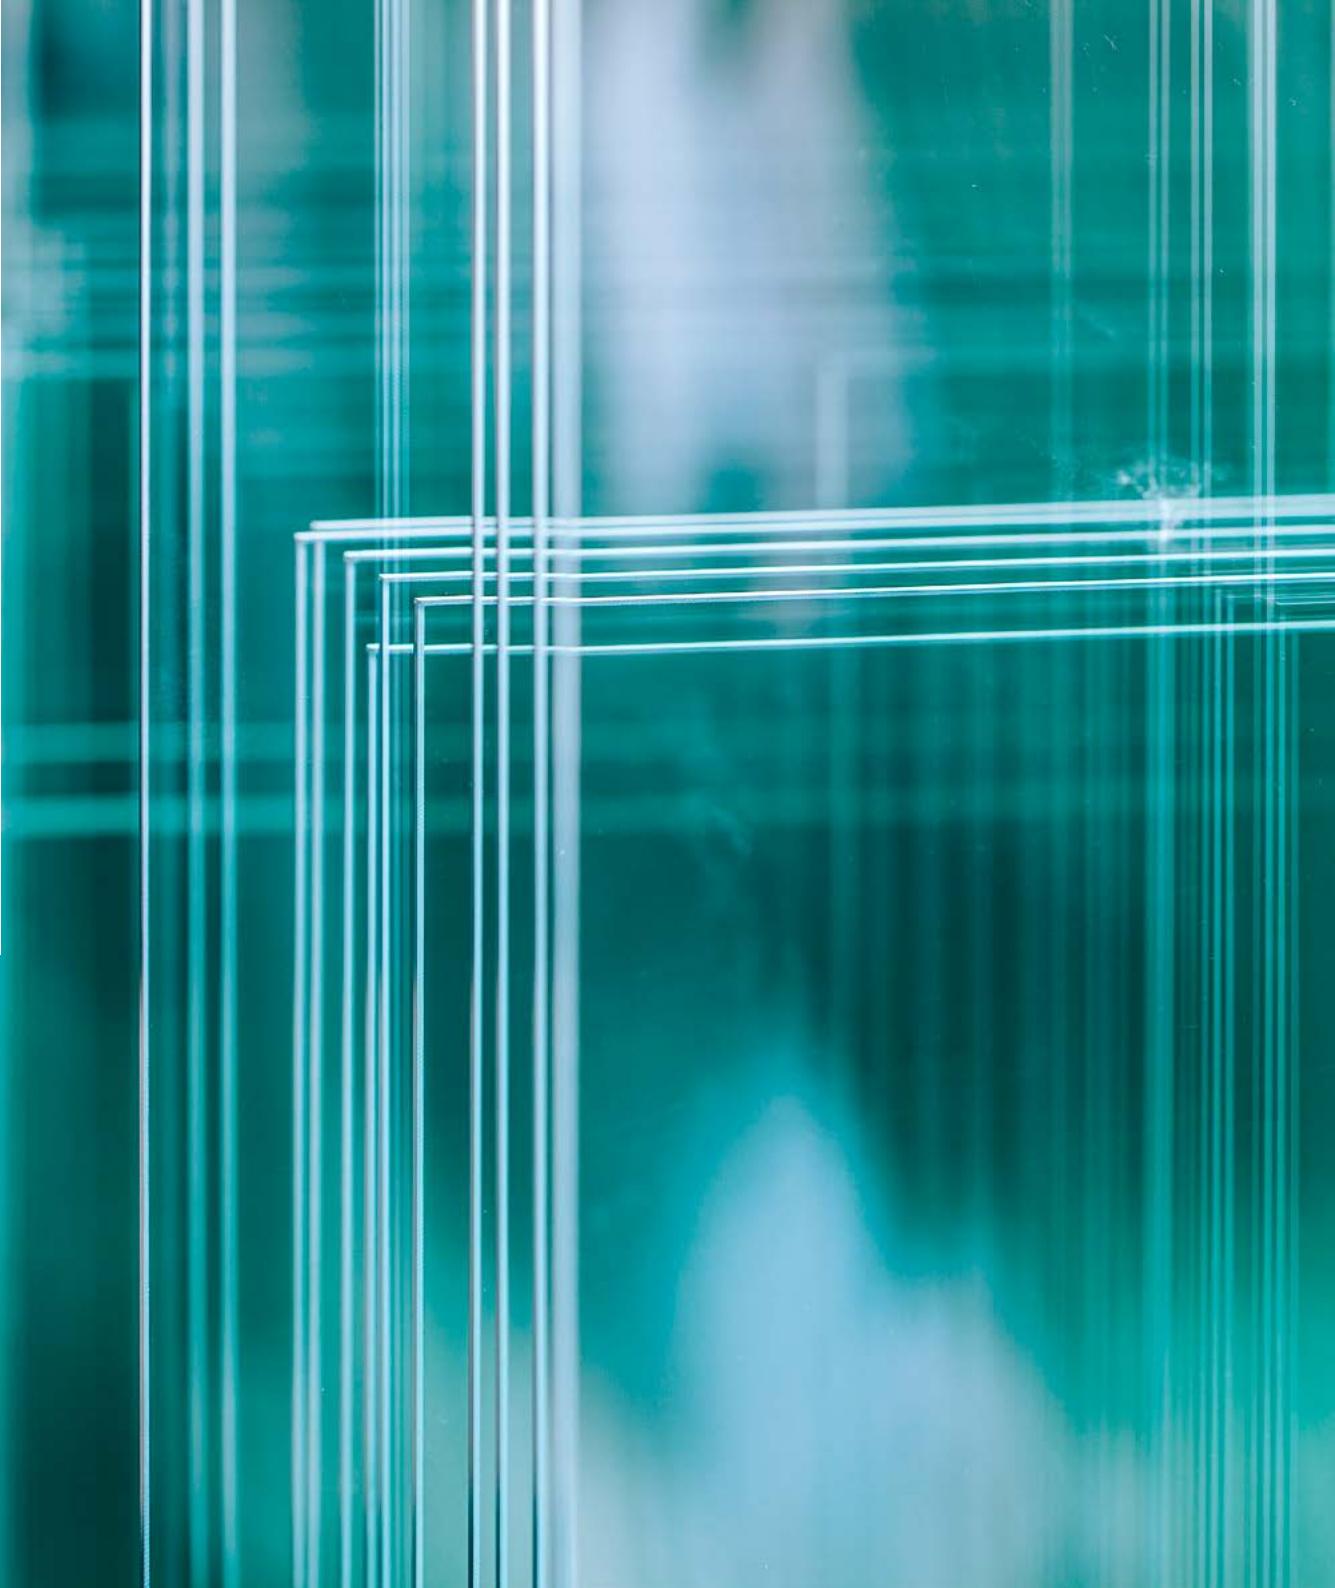

Our reference materials are available in disc and chip forms to suit various analytical techniques including Optical Emission (OE), X-ray Fluorescence spectrometry (XRF), and Inductively Coupled Plasma (ICP). Custom forms are available upon request.

We recognize that sample preparation along with reference materials are critical components in producing high quality analytical data.

We therefore provide sample preparation equipment including disc and pendulum grinders for the surface preparation of metal samples for XRF and OE analysis, fusion systems for the preparation of powdered materials for XRF analysis, and a unique ColdBlock™ digestion system for ICP and AA sample preparation.

ARMI.com

Introduction

LGC™ and ARMI|MBH™ understand that you need solutions that fit your specific requirements with quality you can trust. Our comprehensive range of XRF glass monitor samples enables you to choose the best option for your needs.

Our XRF monitor glasses come from our original Breitlaender standards offering, where we continue to provide you with high-quality solutions through ARMI|MBH. Our unique glass compositions allow for accurate and reliable monitoring of low and high concentration x-ray fluorescence (XRF) calibrations on systems from multiple different XRF manufacturers around the world.

Among the many benefits of using our monitor glass you can expect good elemental intensities as a monitor sample and the stability of our product allows for the sample to be used for a long period of time.

On the following pages you will find our comprehensive offering of XRF glass monitor samples to help you Measure The Difference™. To learn more about ARMI|MBH visit our website or subscribe to our blog to get our latest updates

Science for a safer world

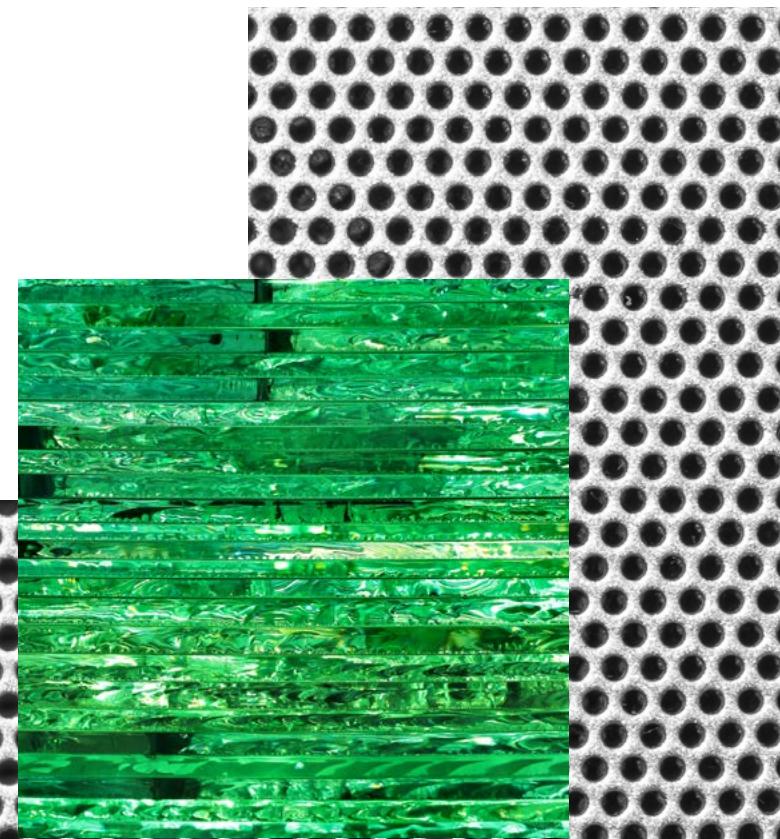

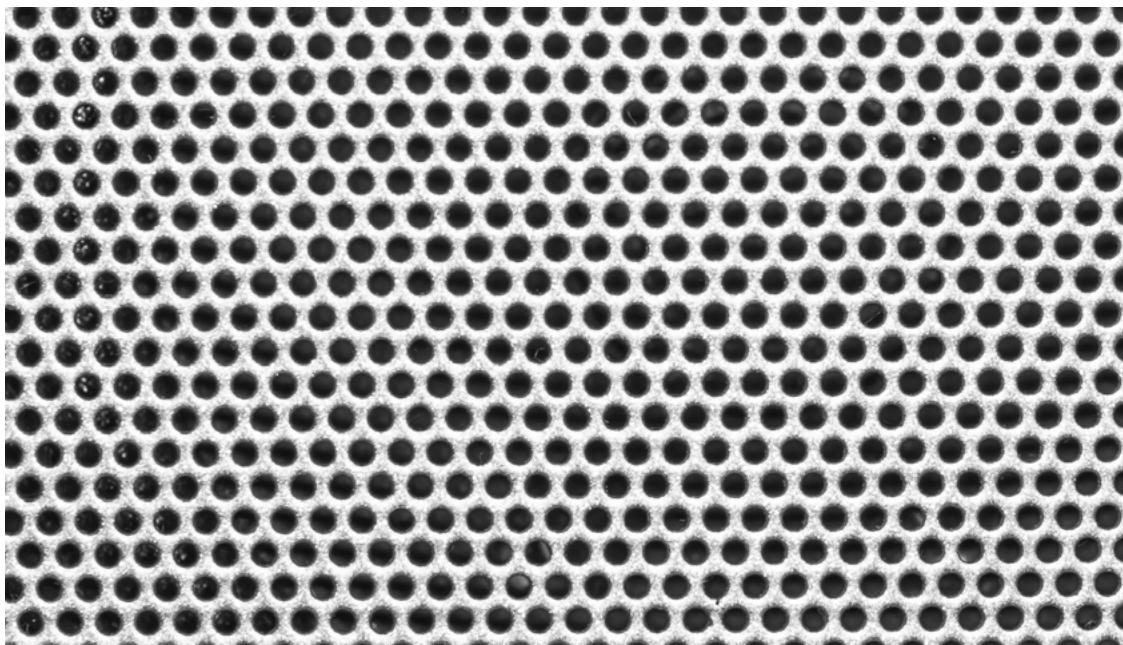

ARMI | MBH is part of the wider LGC Standards family. LGC is the UK's designated National Measurement Institute for chemical and bioanalytical measurements.

With 2,600 professionals working in 21 countries, our analytical measurement and quality control services are second to none.

As a global leader, LGC provides the widest range of reference materials available from any single supplier.

When you make a decision using our resources, you can be sure it's based on precise, robust data.

Together, we're creating fairer, safer, more confident societies worldwide.

Metal Alloy Proficiency Testing Programme (PTP)

Why Choose ARMI | MBH PTP?

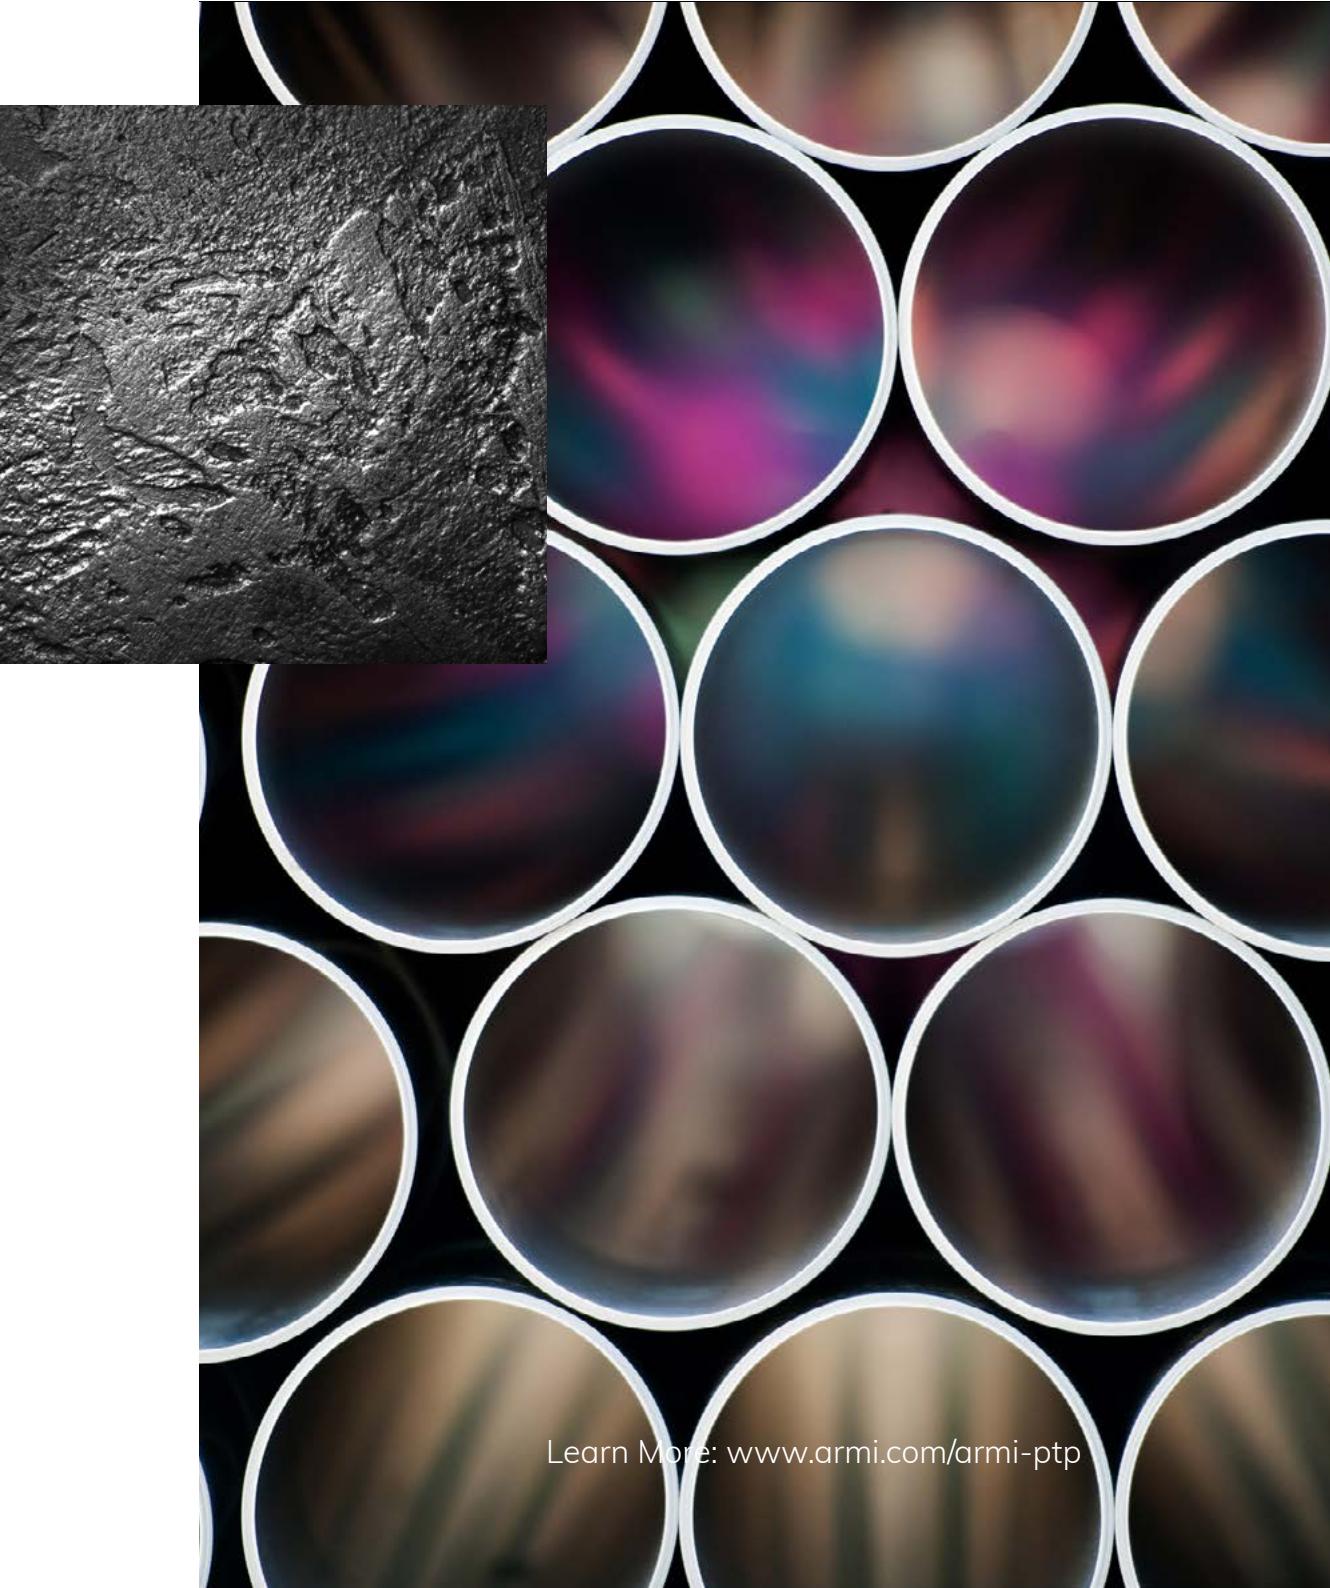

- Monitor your analytical performance as stipulated in the ISO/IEC 17025 laboratory accreditation process
- Measure analytical performance against a CRM's "Assigned Value"
- Large library of materials – over 1,400 metal alloys from aluminum to zinc
- Developed as an alternative to typical round-robin style proficiency testing schemes, which measure performance with non-certified materials
- Provides confidential assessment against peer performance
- Results delivered within days, not months, making it easy to implement as part of your laboratory quality program

Our Reports Include:

- Results presented in a one-page report with a single statistical graph
- A color-coded Certificate of Performance which compares your results to the actual benchmarked data
- A color-coded control chart graphically depicting your data compared to the certified average for each element examined
- A Certificate of Analysis confirming that a CRM was used in the test

How it Works:

- Choose the type of material by matrix group and sample configuration (solids or chips)
- Receive your blind sample, selected from our full stock of CRMs
- Analyze the blind sample, and submit your results to us
- Receive your report within days

Learn More: www.armi.com/armi-ptp

Nieka® G-Series

The solution for high-throughput fusion laboratories

The Nieka GS-4 fluxer is a cost effective automatic fusion machine for XRF with 4 stations and a compact footprint. The G-series fusion components are enclosed in a built in safety cabinet that is locked during fusion until the cooling step is over, providing you with the safest operation.

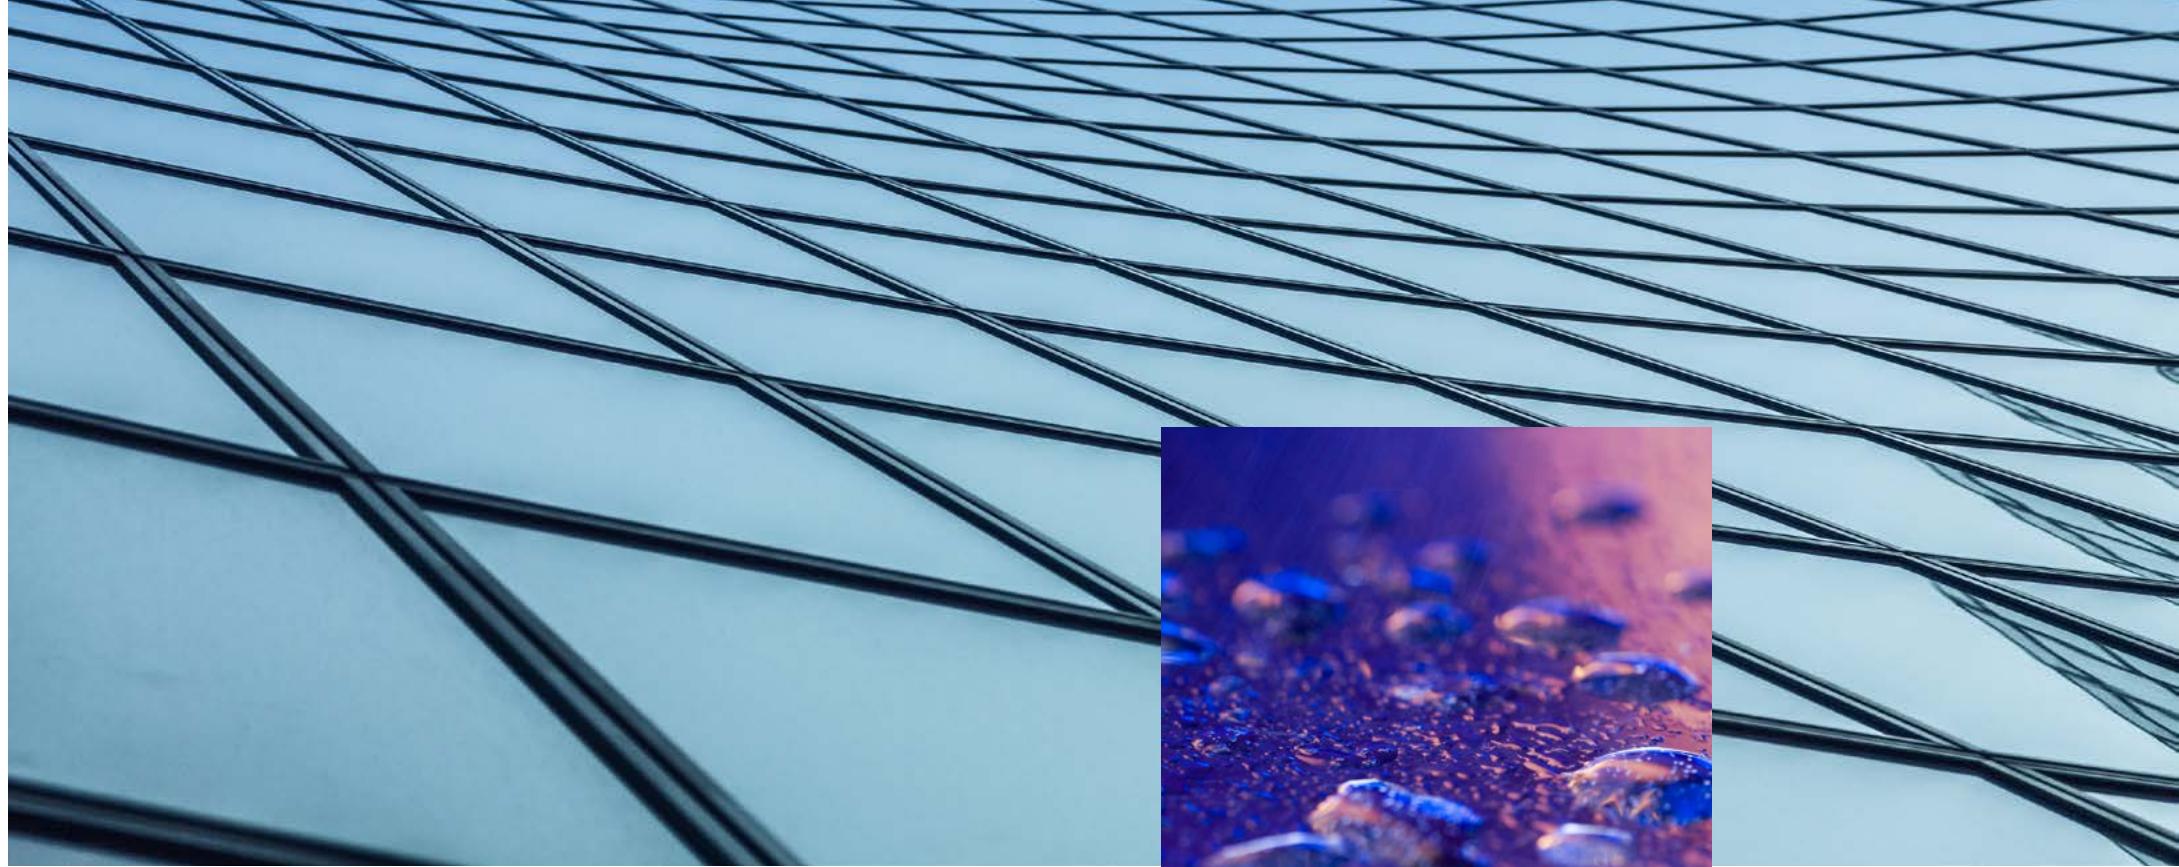

For the first time in a gas fluxer, the G-series offers reliable temperature monitoring of the fusion process (patent pending). With a huge built in touch screen for easy editing of methods and monitoring of your fusion process, you can create perfectly homogeneous fused beads every time.

Bring the power of fusion to your laboratory with this simple safe and cost effective sample preparation solution.

The Nieka GS-4 features:

- High Productivity - 4 positions (up to 24 samples per hour)
- Automated Operation - Multilingual integrated touchscreen controller with accessible controls, easy to follow fusion program execution through the instrument screen, or your PC.
- Monitoring - Temperature monitoring of the fusion process (patent pending), real-time monitoring through the Nieka data management system.
- Efficiency and Repeatability - proprietary heating chambers allow a high thermal efficiency and higher fusion temperatures for difficult samples.
- Easy Installation - low pressure gas line and standard electrical outlet. no compressed air or oxygen is required.
- Safety - integrated locking safety door, real time fusion monitoring and automatic shut off feature.

Our Production Facility

Our high-tech production facility in Manchester, NH is accredited to ISO 17034 as a producer of reference materials and ISO 17043 as a proficiency testing provider.

Our technicians utilize cutting-edge machining and engraving equipment to prepare and provide custom packaging for our range of over 1,400 metal alloy CRMs.

Our state-of-the-art analytical lab is accredited to ISO/IEC 17025 and is fully fitted with a wide array of testing

equipment, including XRF, ICPOES and ICP-MS used for homogeneity and composition testing for our products.

Our expertise with various instrumentation allows us to quickly adapt to our customers' needs, create custom sample compositions, and custom reference materials when needed.

We always strive to provide our customers with the best possible service, and are continually expanding our range of product offerings to meet their needs.

Notes

Notes

Notes

ARMI | MBH reference materials are prepared and certified in Manchester, NH USA. All of our products are produced in our manufacturing facility accredited to ISO 17034 and certified to ISO 9001. They then pass rigorous quality control in our laboratory accredited to ISO/IEC 17025.

We have a state-of-the-art machine shop and an analytical laboratory with a comprehensive array of equipment. Our sales and technical team have extensive knowledge of analysis techniques and reference materials, and are ready to help you choose the right reference material for your specific needs.

Contact us directly at our main production and sales office for your reference material needs, or if you require a custom material.
