## Leading solutions for air monitoring

The new MAS-100 VF<sup>®</sup>

VF = Volume Flow

## Overview

The new MAS-100 VF® active Air Sampler was especially developed for controlled environments requiring microbial control. Regulatory expectations require air monitoring in manufacturing facilities because microbial contamination may influence quality and reduce shelf life. The MAS-100 VF® uses 90 – 100 mm standard Petri dishes, is easy to handle, easy to operate and its compact design is ideal for monitoring your environment. Its electronic speed control maintains an accurate flow rate.

Like all MAS-100® systems, the MAS-100 VF® samples at a flow rate of 100 litres per minute. The perforated lid is the same as on the standard MAS-100® sampler.

The simple user menu is easily accessed and operated by a single touch slide control. Sampling volumes are programmable from 1 – 1,000 litres, with 5 preset volumes to ensure reproducible results.

## Functional principle

The MAS-100 VF® is an Air Sampler that is based on the Anderson impaction principle. The resulting air flow is directed onto a standard Petri dish containing an agar medium. After the collection cycle, the Petri dish is incubated and the colonies subsequently counted.
