

# Viresolve® Pro Solution

Proven viral safety solution designed to provide the highest levels of retention assurance and productivity

## Robust. Productive. Proven.

The Viresolve® Pro Solution provides a comprehensive, flexible template solution for virus filtration in biologics manufacturing. This proven viral clearance solution delivers the highest levels of retention assurance and processing efficiency across a broad range of feed streams.

The Viresolve® Pro Solution is comprised of the innovative, high-performing Viresolve® Pro Device in conjunction with the Viresolve® Pro Shield or the Viresolve® Pro Shield H prefilters. These products are designed to work together to meet your needs providing high parvovirus retention, capacity and flux. Our industry-leading products and services, coupled with our viral clearance expertise, will help you successfully develop, implement, and validate the Viresolve® Pro Solution.

## Benefits

### Viresolve® Pro Solution: High-productivity Virus Filtration

- Improved process economics with high mass capacity
- High flux for faster processing
- Consistent batch-to-batch performance
- Easy to install, use and integrity test
- Caustic sanitizable

### Viresolve® Pro Device: Robust Parvovirus Clearance

- $\geq 4.0$  log removal of parvovirus
- Devices are 100% integrity tested with air/water diffusion and Binary Gas
- Robust retention maintained during process interruption/depressurization

## Prefilters: Viresolve® Pro Shield & Viresolve® Pro Shield H

Provides robust adsorptive (cation/mixed-mode) prefiltration to remove fouling protein aggregates

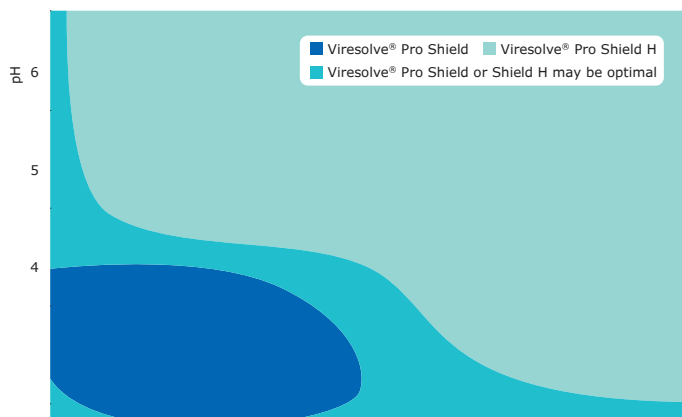

- Enhance throughput and process robustness of Viresolve® Pro Devices
- Effective across a broad range of pH and conductivity conditions

### Enhanced Process Robustness

For feed streams with high levels of fouling protein aggregates, the Viresolve® Pro Shield or Viresolve® Pro Shield H can be used to improve the capacity of the Viresolve® Pro Device.

These membrane prefilters adsorb protein aggregates that foul or plug the pores in the Viresolve® Pro membrane. Viresolve® Pro Shield and Viresolve® Pro Shield H have different membrane surface modifications to maximize adsorption of protein aggregates under a broad range pH and conductivity conditions (Figure 1).

The Viresolve® Pro Prefilter Selector Guide (TB1140EN00) provides guidance and information on prefilter selection.

**Figure 1.** Contour plot showing the optimal pH and conductivity conditions for Viresolve® Pro Shield and Viresolve® Pro Shield H.

## Virus Filter: Viresolve® Pro Device

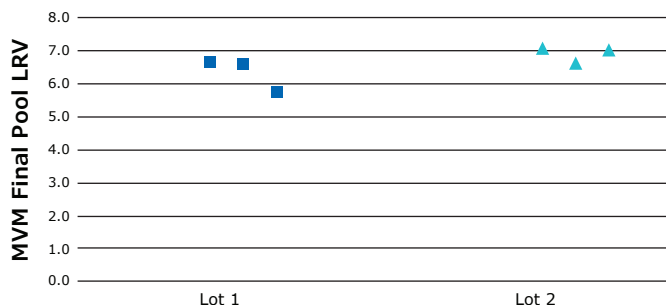

Provides robust viral clearance

- $\geq 4.0$  logs of Minute Virus of Mice clearance
- $\geq 5.0$  logs of Murine Leukemia Virus clearance
- Delivers high capacity

### High Virus Retention

Retention performance of the Viresolve® Pro Micro 40 Devices, containing two lots of membrane, was evaluated under aggressive processing conditions. Testing was performed with a monoclonal antibody feed stream at 60 psi to a filtration endpoint of 90% flow decay, followed by a 20 L/m<sup>2</sup> buffer flush. Samples were collected from final filtrate pools and a summary of calculated log reduction values (LRV) is shown in Figure 2. As can be seen from the results, the Viresolve® Pro Solution achieved at least 5.8 logs of MVM retention. These results demonstrate robust virus clearance, even out to 90% flow decay, at high pressure.

Virus retention performance of the Viresolve® Pro Solution under a range of processing conditions is summarized in the application note *Virus Retention Performance of Viresolve® Pro Devices under a Range of Processing Conditions* (WP3374EN).

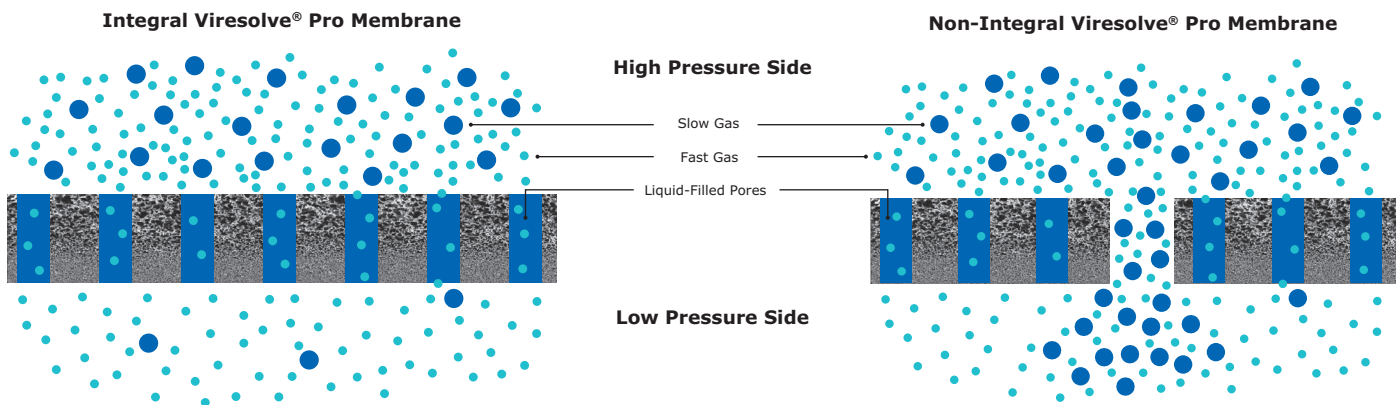

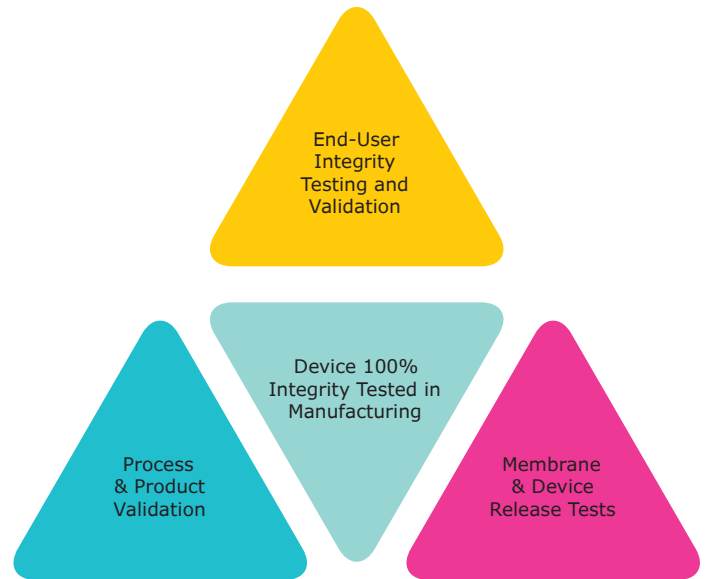

**Figure 2.** Summary of MVM results for two membrane lots of Viresolve Pro® Micro 40 Devices.

## Building Quality

The virus retention performance and integrity of Viresolve® Pro Devices is assured with our comprehensive approach to quality.

### Assuring Retention

Retention performance is assured with our proprietary Binary Gas test which detects defects as small as 3-5 microns, that cannot be detected using a traditional air/water diffusion test, Figure 3. This high sensitivity test is especially valuable for Viresolve® Pro Devices, where small defects could impact virus retention performance. Every Viresolve® Pro Device must pass Binary Gas testing before release, assuring the highest levels of virus retention for your filtration operations.

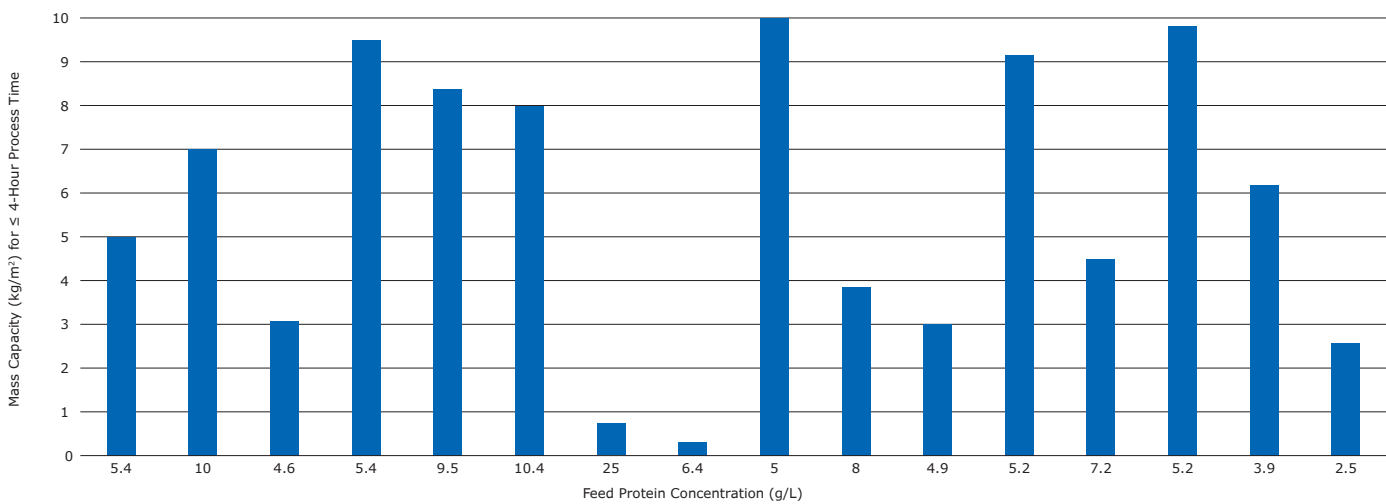

**Figure 3.**

Principles of Binary Gas Test. This proprietary test measures the composition of a mixture of two gases on the upstream and downstream sides of the Viresolve® Pro membrane to detect defects as small as 3-5 microns in size.

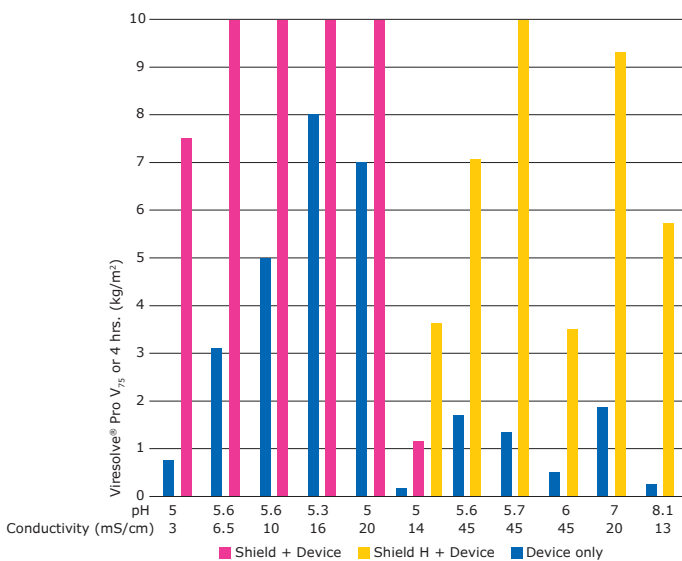

High Capacity and Flux

The Viresolve® Pro Solution efficiently processes feed streams of different pH, conductivities and protein concentrations. When used upstream of Viresolve® Pro Devices, Viresolve® Pro Shield and Shield H enhance the throughput and processing robustness of filtration operations.

Figure 4 shows the results of throughput testing with Viresolve® Pro Devices alone (A) or in conjunction with Viresolve® Pro Shield and Shield H (B). In most cases, implementing the prefilter increased the capacity of the Viresolve® Pro Device by an average of two-fold. The Viresolve® Pro Solution enables rapid processing delivering mass flux in the 1.25-2.5 kg/m<sup>2</sup>/hr range.

**Figure 4A.** Mass capacity on Viresolve® Pro Devices with mAbs of different protein concentrations. In all cases, processing time was less than four hours.

**Figure 4B.** Mass capacity of the Viresolve® Pro Solution across a range of pH and conductivities. In all cases, processing was stopped at 75% flow decay or four hours.

## Flexible Manufacturing

The Viresolve® Pro Shield, Viresolve® Pro Shield H and Viresolve® Pro Devices are easily integrated into flexible, easy-to-use systems for pilot to full-scale manufacturing.

### Viresolve® Pro/Pro+ Magnus Holders for Viresolve® Pro Solution

Viresolve® Magnus Holders are designed for large volume processing. The Viresolve® Pro Magnus Holder is designed to run the Viresolve® Pro Device alone, while the Viresolve® Pro+ Magnus Holder is designed to run the Viresolve® Pro Device coupled with either the Viresolve® Pro Shield or Shield H.

- Quick and easy loading and unloading
- No product contact
- Minimized holder footprint with vertical orientation
- Rods in multiple lengths for various sized installations
- Simple manual hydraulics

**Mobius® FlexReady Solution**

### Mobius® FlexReady Solution for Virus Filtration

The Mobius® FlexReady Solution for large-scale virus filtration is an easy-to-use system featuring an optimized single-use flow path designed to fully support your virus filtration needs.

For more information on the Mobius® FlexReady Solution for large scale virus filtration, refer to datasheet DS1259EN00.

## Partner with a leader in viral safety

### Virus Filtration Process Development Service

Optimizing a virus filtration process involves evaluating the effects of multiple process parameters to identify conditions that will ensure a robust, consistent, and economical operation. We work side-by-side with development engineers and manufacturers, helping them develop efficient, cost-effective filtration operations.

We can help you:

- Maximize filtration efficiency
- Maximize process robustness
- Meet your economic targets

### The Viresolve® Pro Solution is supported by the Emprove® Program - your fast track through regulatory challenges.

Complementing our product portfolio, the Emprove® Program provides three types of dossiers to support different stages of development and manufacturing operations such as qualification, risk assessment and process optimization. The dossiers consolidate comprehensive product-specific testing data, quality statements and regulatory information in a readily-available format to simplify your compliance needs.

### Viral Clearance Services

Viral clearance studies are critical to the validation of downstream processes, ensuring sufficient reduction of potential viral contaminants during downstream processing.

BioReliance® viral clearance studies are designed and executed by experts in regulatory, downstream processing, and virology at our facilities in Singapore, the U.S., and the UK. Our global experts can support you with your IND and BLA studies in accordance to regulatory guidelines for monoclonal antibodies, recombinant proteins, and plasma derivatives. Our dedicated project management support and local teams of experienced technical experts accelerate your time to results and minimize risk as you bring your product to market.

### Virus Filter Implementation Service

Our engineers can leverage the results of bench-scale studies to help implement your pilot or production scale virus filtration operation. This streamlines implementation and avoids the pitfalls that can impact production timelines and process economics.

## Specifications

### Viresolve® Pro Shield, Viresolve® Pro Shield H and Viresolve® Pro Devices

ISO 9001 Quality Standard	These products are manufactured in a facility whose Quality Management System is approved by an accredited registering body to the appropriate ISO 9001 Quality Systems Standard.
Particulate and Bioburden	These products are manufactured in an ISO Class 8 (Per ISO 14644-1) controlled environment for particulate classification only.
Animal Origin	All components used in the manufacturing of these products are either animal-free or in compliance with EMEA/410/01.
USP <87> Biological Reactivity Tests	Component materials for these products were tested and meet the criteria for non-cytotoxicity for the USP <87> Cytotoxicity L929 MEM Elution Tests.
USP <88> Biological Reactivity Tests	Component materials for these products were tested and meet the criteria for USP <88> Biological Reactivity Tests for Class VI Plastics.
Bacterial Endotoxin	An aqueous extract from these products contains less than 0.25 EU/mL as determined by the Limulus Amebocyte Lysate (LAL) test.
Membrane Bacteriophage Retention	Membrane samples exhibited $\geq 4.0$ LRV of $\phi$ X 174 bacteriophage at a minimum challenge level of $10^7$ pfu/cm <sup>2</sup> in the presence of a model protein at V <sub>75</sub> .
Bacteriophage Retention	Viresolve® Pro Device samples exhibited $\geq 4.0$ LRV of $\phi$ X 174 bacteriophage at a minimum challenge level of $10^7$ pfu/cm <sup>2</sup> in the presence of a model protein at V75.
Non-Fiber Releasing	These products are non-fiber releasing filters as defined in 21 CFR 210.3(b)*.
Hydraulic Stress Test	Samples were integral based on an Air/ Water Diffusion Test, before and after a forward stress to 4.1 bar (60 psid) at 25 °C.
Manufacturing Integrity Test	All Viresolve® Pro Micro 40 Devices included in the Viresolve® Pro Micro 40 Device Kit must pass the Binary Gas Test.  All Viresolve® Pro Modus and Magnus Devices must pass the Pressure Hold, Water Flow Rate, Air/Water Diffusion Test and Binary Gas Test.  All Viresolve® Pro Shield and Viresolve® Pro Shield H must pass an aerosol particle challenge and housing pressure hold.  All Viresolve® Pro Devices exhibited an air diffusion flow rate at 3.4 bar (50 psig) in water at 25 °C of less than or equal to: <ul style="list-style-type: none"> <li>0.7 cc/min per Viresolve® Pro Modus 1.1 Device</li> <li>2.7 cc/min per Viresolve® Pro Modus 1.2 Device</li> <li>8.8 cc/min per Viresolve® Pro Modus 1.3 Device</li> <li>20 cc/min per Viresolve® Pro Magnus 2.1 Device</li> <li>60 cc/min per Viresolve® Pro Magnus 2.2 Device</li> </ul>
Caustic Sanitization	These products may be sanitized by one 60-minute flush at 1.8 bar (25 psig) in 0.5 Normal Sodium Hydroxide at 25 °C followed by a maximum 16-hour static soak.

\*Filters with the non-fiber releasing claim, as defined in 21 CFR 210.3(b)(6), will also support filter use for liquid filtration in the manufacture, processing or packing of injectable drug products, based on 21 CFR 211.72 cGMP for finished pharmaceuticals.
